What is a co-located energy storage system?

Co-located energy storage systems can be either DC or AC coupled. AC coupled configurations are typically used when adding battery storage to existing solar photovoltaic (PV) systems, as they are easier to retrofit. AC coupled systems require an additional inverter to convert the solar electricity from AC back to DC in order to charge batteries.

What is a DC-coupled battery energy storage system?

What does the dc side of energy storage include

Cost: AC-coupled systems cost more than DC-coupled systems as they use multiple inverters. **Lower efficiency:** The stored energy is converted three times, from the DC current to AC current to supply the building and then back to DC current to the battery and again back into AC. Each conversion results in a small amount of energy loss.
