

# What planet is close to moon now

Which planets will be visible on November 17 & 20?

On November 17, the 98%-illuminated Moon and Jupiter (mag -2.8) will meet in the constellation Taurus. The planet will rise in the evening and will be visible to the naked eye. On November 20, the 77%-illuminated Moon and Mars (mag 0.2) will meet in the constellation Cancer. The planet will rise in the evening and will be visible to the naked eye.

Will Uranus & the full moon meet on November 15?

On November 15, the Full Moon and Uranus (mag 5.7) will meet in the constellation Taurus. The bright Pleiades star cluster will also shine nearby. The planet will appear in the sky in the evening. Note that Uranus is rather faint to be observed without any optical aid, so it's best to bring a pair of binoculars.

How do I view planets and stars near our natural satellite?

To view the planets and stars near our natural satellite, choose a cloudless night and use Star Walk 2 or Sky Tonight to learn when the celestial objects are best placed for your location. For a visual explanation, watch our recently released video on how to identify bright objects near the Moon using the Sky Tonight app, step by step.

Is a bright object near the Moon a star or a planet?

A bright object near the Moon can be a star or a planet. You can tell the difference by checking if the object twinkles. If it does, then it's a star; if not, it's a planet. Also, Jupiter and Venus (sometimes Mars and Saturn, too) are way brighter than most stars.

Which supermoon is highest in the sky in 2024?

A full moon rises opposite the sunset, is highest in the sky at midnight and lies low on the western horizon opposite the sunrise. This is the third of four supermoons in a row. And it's the Hunter's Moon, plus it's the closest - largest and brightest - supermoon in 2024.

Can you see Neptune and Uranus at night?

Uranus can be seen for more than 9 hours during the late night/early morning and until sunrise. You may need binoculars. Neptune is roughly in the opposite direction of the Sun, so it is visible during most of the night. Very faint, use binoculars. Need some help? Sky map showing night sky tonight in The Eastern, Ohio, USA.
